

minion
SECURITY

Master your SQL Server enterprise with MinionWare

- AD Expansion** *Report on who has what permissions to SQL Server, even if the logins are in a deeply nested Windows group.*
- Weak Passwords** *Auto-check for weak passwords using a "no touch" method, so managed servers aren't overwhelmed.*
- Audit Compliance** *Minion Security tracks permissions for SQL Server logins, Windows logins, and Windows groups.*
- Standardize User IDs** *Standardize user IDs across the enterprise, solving the orphaned user issue once and for all.*
- Clone Users Utility** *Script and clone logins, associated users, and permissions, to one or more servers.*
- Sysadmin Member Alert** *Automatically alert on new and retired members of high level SQL roles.*
- Effortless New User Setup** *Set up new users and standardize account permissions in seconds.*
- Role Membership Collection** *Track SQL Server roles and membership on managed servers.*
- Back Up Logins & Permissions** *Easily reinstate dropped logins or changed permissions.*
