# SQL SATURDAY 2016
# THE ENTERPRISE SCRIPTING WORKSHOP

### Scripting decisions

We talk about a lot of the answers – and the considertions around the answers – in class, but here's the list of some of the things you *must* consider when you're scripting.

See the slide deck for more scripting principles.

**Versions of Windows or SQL**: How do I handle different versions? Some things aren't available in earlier versions.

**Errors**: How do I handle errors? Continue, stop, log and continue, what?

**Worst case**: What's the worst case scenario for this? Case sensitivity, collations, user inputs, large resultsets?

**Bulk insert**: Should I use bulk insert, or one-at-a-time? Tradeoffs include table locking vs overhead.
